

# Subsea Control and Test Panels

FES Subsea Control and Test Panels allow for Diver operations and ROV intervention with FES Subsea Hot Stabs.

Using the latest in design and development techniques and software, FES Subsea can incorporate a wide range of client requirements and bespoke equipment to create easy to use, space efficient Control and Test Panels.

With design pressure ratings up to 15,000 PSI, FES Subsea Control and Test Panels can be manufactured to meet a wide range of operating conditions and client requirements.

#### Key Features:

- Complete with Diver lever operable and ROV interfaces
- Isolation Valves can be incorporated as required
- Designed to accommodate FES Subsea Hot Stab for test, depressurisation or chemical injection
- ROV Docking Points
- Complete with associated Pipework & Fittings
- Designed to be integrated into client's subsea hardware
- Design Pressure up to 15,000 PSI
