

Flexible Engineered Solutions

# Bespoke Engineering

Not every project is fortunate enough to be able to utilise existing products. For these special cases FES Subsea can provide engineering design, manufacture and testing solutions for a wide range of bespoke, existing design or company specified items to meet any and all client requirements.

- Existing items include Pig Signalling equipment, Abandon & Recovery Heads, Transport Skids, Deployment Baskets and Metrology equipment.
- Project scopes including fabrication, NDT, pressure testing, load testing and coating are all available.
- Design in accordance with any project required design codes including PED, PD5500, ASME VIII, B31.3 and B31.8.
- Topside or subsea applications.
- Permanent and temporary service.
- Range of materials including carbon steel, structural steel, stainless steel and exotic stainless steels.
- Able to supply a full corrosion protection package including painting and sacrificial anodes.
- Designs suitable for ROV operation if required.
- Also able to incorporate compatibility with existing FES products such as HOT STABS and RECEPTACLES, PIG LAUNCHERS and RECEIVERS, VENT HATCHES and PIG LOCKS.
